

SUNeVision announces 2022/23 annual results

新意網公布2022/23年度全年業績

SUNeVision Holdings Ltd. announced its final results for the year ended 30 June 2023. During the year under review, SUNeVision's revenue increased 12% year on year to HK\$2,346 million, driven largely by increased demand for data centre space from hyperscale customers, together with price increases for existing customers. EBITDA rose 12% year on year to HK\$1,677 million. Profit attributable to owners of the Company increased 7% year on year to HK\$905 million.

MEGA-i remains a critical Asian hub, housing many global and regional internet players and telecommunication companies. SUNeVision continued to see strong demand for Hong Kong as a bridge connecting the mainland with the rest of the world. Asia Direct Cable ("ADC"), which will land at SUNeVision's cable landing station in Chung Hom Kok later this year, has already started to bring additional traffic and business to MEGA-i. Rapid developments in Generative AI and its applications have driven an uptake in data centre capacity over the past year in the US. This trend will benefit future data centre demand and development. MEGA IDC, SUNeVision's upcoming state-of-the-art data centre capable of housing the most demanding servers, will see the completion of Phase One (approximately 500,000 square feet of GFA and 50MW IT load) by the end of the year and will be ready for service early next year. Considering the resource requirements for new projects to fulfil upcoming business demand, as well as the persistent high-interest-rate environment, SUNeVision will rebase its dividend to reduce leverage and interest payments and continue to manage its balance sheet to

ensure a cost-effective capital structure. SUNeVision is confident that it will continue to see healthy growth in demand for data centre space in the coming years and has already acquired sufficient land to cater for the growth in demand for data centres for the next four years.
